# FOREST STEWARDSHIP MANAGEMENT PLAN

Prepared For:  
Benoit School District

Prepared By:  
Cheryl Arnold  
Ms. Forestry Commission

Time Period Covered by This Plan:  
2012 - 2021

Date Plan Prepared:  
2012-02-15

Plan Type:  
Stewardship / Stewardship

This plan was developed in accordance with the rules of the Stewardship program.

**Property Name: S16-T21N-R7W**

Name: Benoit School District  
Mailing Address: Box 189  
City, State, Zip: Benoit, MS 38725  
Country: United States of America  
Contact Numbers: Home Number:  
Office Number: 662-742-3287  
Fax Number: 662-742-3149  
E-mail Address: bculley@benoit.k12.ms.us  
Social Security Number (optional):

**FORESTER INFORMATION**

Name: Cheryl Arnold , Service Forester  
Forester Number: 01662  
Organization: Ms. Forestry Commission  
Street Address: P.O. Box 1646  
148 N. Edison St.  
City, State, Zip: Greenville, MS 38702  
Contact Numbers: Office Number: 662-332-3358  
Fax Number:  
E-mail Address: carnold@mfc.state.ms.us

**PROPERTY LOCATION**

County: Bolivar    Total Acres: 644    Latitude: -90.93    Longitude: 33.67  
Section: 16    Township: 21N    Range: 7W

**DISCLAIMER**

This information was derived from a small sampling of the forest resources. It reflects a statistical estimation that is only intended to be accurate enough for the purposes of making decisions for the short-term management of these resources. These estimations are temporally static. Events and circumstances may occur within the survey area that will physically alter the forest resources and therefore will not be reflected in this plan.

**INTRODUCTION**

This Forest Stewardship Management Plan will serve as a guide for accomplishing the goals and objectives for your property. In addition to addressing your specific goals and objectives, this plan includes recommendations for maintaining soil and water quality and protecting your forest from insects, disease, and wildfire. Recommendations are based on observation and assessment of the site.

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

**OBJECTIVES**

*Timber Production*

The goal is to produce high quality sawtimber. This will be accomplished through reforestation and timber stand improvement practices such as herbicide applications, prescribed burning, thinning at specified intervals, and other silvicultural practices. Forestry Best Management Practices will be implemented to prevent erosion and protect water quality.

*Wildlife Management - General*

The goal is to provide a diversity of habitats suitable for a variety of game and non-game wildlife species. Habitat management will focus on developing a variety of food, cover, water, and space. This will be accomplished by establishing and maintaining access roads and firelanes, providing openings within the forest, and the management of trees located within the Streamside Management Zone.

**PROPERTY DESCRIPTION**

*General Property Information*

This section is located 4 miles west of Dahomey in Bolivar County, MS. Longshot Road runs through the section on the North and East sides. Dahomey Wildlife Management Area is adjacent to the section on the North side. This section contains 481.4 acres of open agricultural land and 162.46 acres of forest land. This section was clearcut in 1997 and replanted the following year in 1998.

*Water Resources*

No perennial water resources were identified during a reconnaissance of the property. However, intermittent streams and drains identified will be managed in accordance with Mississippi's Best Management Practices.

*Timber Production*

The goal is to maximize the production of high quality timber. This will be accomplished through the application of timely thinning and other silvicultural practices designed to enhance timber quality and growth. Forestry Best Management Practices will be implemented to prevent erosion and protect water quality.

*Threatened and Endangered Species*

No threatened and endangered species were identified during the reconnaissance and evaluation of your property. However, if any threatened or endangered species should ever be found, management plans would be altered to protect the plant or animal species. The Mississippi Forestry Commission will continue to monitor the section for threatened or endangered species.

*Interaction with Surrounding Property*

Prescribed practices should be carried out in a manner that will minimize adverse impacts on surrounding properties. Consideration should be given to potential air, water, visual, and other impacts. In addition, practices carried out should have positive effects on the surrounding community such as improved wildlife habitat and soil stabilization.

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

*Soils General*

Soils were evaluated on the property to determine the suitability of the site for the proposed activities. Forest practices were planned so as to minimize erosion or other adverse effects on the soil. The following soils are identified for this property: Sharkey Clay (Sa) and Dowling Clay (Dc).

*Archeological and Cultural Resources*

No archeological and cultural resources were found during a reconnaissance of the property. However, if archeological or cultural resources are discovered at anytime on the property, special management measures will be implemented to preserve these sensitive areas. These areas can include churches, old cemeteries, old home sites, indian mounds, or areas of historical importance.

## **GENERAL PROPERTY RECOMMENDATIONS**

*Forest Protection*

A healthy and vigorously growing stand is the best defense to an attack from a variety of forest insects, plants and pathogens.

*Insects and Diseases*

Trees are subject to attack from insects and diseases. Different insects and diseases affect trees according to the age, species, and condition of the trees. Planted stands of pines and pure stands of hardwoods are particularly susceptible to attack. Since there are many different insects and diseases, no attempt will be made here to explain all of them. The property should be inspected at least annually for possible signs of insect and disease activity. Some things to look for are:

- Unseasonable leaf fall
- Discoloration of leaves or needles
- Pitch pockets on pine trees
- Heavy defoliation of hardwood leaves
- Groups of three or more dying trees within a stand

This list does not cover all instances of insect or disease attacks. If anything unusual is noticed, report it to a forester. In most cases, insect and disease problems can be controlled if discovered early.

*Fire Protection*

Your forest should be protected from wildfire at all times. The best way to protect your investment is by establishing and maintaining firebreaks around the property. Guidelines for establishment and maintenance of firebreaks may be found in Mississippi Forestry Commission publication #107, *Mississippi's Best Management Practices*.

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

**Grazing**

Tree seedlings should be protected from grazing until such time as the terminal bud of the sapling is beyond reach of livestock. Domestic livestock should be denied access to the tree planting area.

**Boundary Lines**

It is the responsibility of the landowner to ensure that all property lines and boundaries designating areas to receive forestry work are clearly identified and visible to all contractors.

**Note:** Some forest practices may cause temporary adverse environmental or aesthetic impacts. These practices will only cause short-term adverse impacts where they are installed. Special efforts will be made to minimize adverse effects when carrying out any of the practices. Examples include: site preparation, planting, prescribed fires, firebreak installation and maintenance, road installation and maintenance, pesticide applications and timber harvesting.

*Water Quality Protection*

The objective of the landowner is to protect, preserve and enhance all water sources on or transecting the property. This can best be achieved by implementation of Best Management Practices in all aspects of the management of the property.

*Aesthetics*

The goal is to assure that the property is managed in such a way that is aesthetically pleasing to the landowner as well as the community. Activities could include, maintaining buffer strips along the road and adjacent to the home site, planting wildflowers along the road, and trees with attractive fall and spring color along the drive and near the home site.

*Ecological Restoration*

Ecological restoration is the process of assisting the recovery of an ecosystem that has been degraded, damaged, or destroyed. A reconnaissance of the property has been conducted and no ecological restoration activities are recommended at this time.

*Wildlife Mgt. Target Species*

The objective of this practice is to provide habitat best suited for the featured or target species. Habitat management will focus on providing food, cover, water, and space to facilitate the target species.

*Environmental Education*

Environmental educational goals are to provide educational opportunities for children and adults through the development of items such as nature trails with tree identification markers, wildlife viewing areas, picnic areas, parking, public restroom facilities.

*Wildlife Management General*

The goal is to provide a diversity of habitats suited for a variety of game and non-game wildlife species. Habitat management will focus on providing a variety of food, cover, water, and space. This will be accomplished, in part, by establishing and maintaining

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

access roads and firelanes, providing openings within the forest, and leaving mast producing and den trees.

*Timber Management*

Timber management goals for this property are to manage timber resources in such a manner as to maximize timber production throughout the life of the stand.

*Recreation*

According to landowner objectives the recreational use of the property could prove to be an avenue for personal enjoyment or for generating income. An evaluation of your property should be conducted and a plan developed to accomplish your specific goals for recreational activities on your property.

## **SOIL TYPES**

*Soil Description*

The two main soils found on the property are Sharkey Clay and Dowling Clay.

Sharkey Clay is a dark colored, poorly drained soil formed from Mississippi River alluvium. It is one of the most extensive soils in the county. It is medium acid to neutral and contains a moderate amount of organic matter. It has slow permeability.

Dowling Clay is a dark colored, poorly drained soil consisting of firm clay throughout. It occupies depressions or abandoned stream channels. This soil formed from alluvium washed from sharkey soils. It remains wet longer than most other soils because after it receives water from the surrounding slopes.

## **STANDS**

*Stratum 2*

This submerchantable stratum contains the following stands. Stand #2 with 25.26 acres, Stand #3 with 49.91 acres, Stand #5 with 42.52 acres, and Stand #6 with 44.77 acres for a total of 162.46 acres of forest land. All the stands were harvested and replanted at the same time in 1997-1998.

*Stand Description*

All four stands in this submerchantable stratum contain approximately 125 trees per acre and are about 14 years old. Dominant species include Sugarberry, Green Ash, and Elm. These stands are surrounded by agricultural land and receive regular runoff from them. The stands were harvested in the year 1997 and subsequently replanted in 1998 with Nuttall Oak seedlings.

*Stand Recommendations*

This stand needs to continue to grow for the next 10 years. It will be monitored for fire, insect, and disease.
